WE CAN’T STOP NOW

Because of you, we’ve changed the game... there’s a new sense of fight in the community that we never really had before.”

~ Pat Quinn, co-founder of the ALS Ice Bucket Challenge and person with ALS

THE PROBLEM: there is currently no known cure or effective treatment for ALS

? Much is still unknown about what causes ALS. More research is needed.

$ It can cost $2 billion to bring one new treatment to market. More funding is needed.

THE SOLUTION: an integrated system supporting the search for a cure for ALS

Through a nationwide network of chapters, The ALS Association is THE ONLY ORGANIZATION LEADING THE FIGHT TO DISCOVER A CURE FOR ALS ON EVERY FRONT — research, public policy, and care services

RESEARCH

Increasing our annual research spending

Funding more Phase II clinical trials

Ensuring promising research receives critical support

PUBLIC POLICY

Accelerating access for people with ALS to new treatments

Encouraging companies and government to invest in ALS research

Promoting legislation and regulations that benefit the ALS community

CARE SERVICES

Improving access to medical care and community resources

Investing in ALS Association Certified Treatment Centers of Excellence

Supporting the ALS community through regional care management programs

BUT WAIT, THERE’S MORE: progress made possible by the ALS Ice Bucket Challenge

New COLLABORATIVE RESEARCH initiatives

Project MinE: global sequencing effort to identify new genes linked to sporadic and familial ALS

The Neuro Collaborative: world-renowned California laboratories using stem cell technology to accelerate the discovery of potential therapies for ALS

The New York Genome Center: repository for ALS genome sequencing data that increases number of genetic samples scientists can study

ALS ACT: joint project aimed at expediting clinical trials and searching for biomarkers as indicators of disease

18 organizations convened in DC to collaborate on new approaches to expedite therapy delivery to people with ALS

Translational research accelerates the pathway between basic science and clinical trials

Support groups: a place for sharing, encouragement, and educational presentations for anyone affected by ALS

Assistive technology programs and lending libraries help people with ALS maintain communication and preserve independence

You took the challenge: NOW WHAT?

PARTICIPATE

Connect and get involved with the Golden West Chapter

ADVOCATE

Urge Congress to expand its support of ALS research and care

DONATE

Fund progress to help treat and cure ALS once and for all

THE PROBLEM: there is currently no known cure or effective treatment for ALS
